

Tru Align®

Tru Align Benefits

Fits Every Tire/Wheel Combo - Never Scratch the Rim

Never turn away a wheel alignment job because you fear scratching expensive wheels or are unsure your clamps don't properly attach to the customer's wheels.

Aligns Correctly the First Time

Alignment readings off the hub for the greatest possible accuracy. Never again fight clamp fitment issues.

Increase Profits Immediately

Stop turning away customers. Charge a premium to align expensive rims. The Kit pays for itself, especially using the \$80/Month financing option.

The Tool No Alignment Tech Should Be Without

Tru Align's unique, patented wheel alignment adapter system takes the wheel out of the alignment equation.

The Tru Align system will allow you to align original equipment, custom and even bent wheels, while allowing you to continue to use your current alignment machine. No wheel is too large for Tru Align. And, because the readings come off the hub, the

alignment is more accurate than the use of standard alignment clamps.

The Tru Align system is constructed from hardened steel and aircraft grade aluminum. It will last a lifetime.

The Tru Align system has the shortest learning curve of any tool you will implement into your business.
